

Installation Guide

Our app has not been released to the Android Play store. Because of this to use the app you have to know one of the original developers / have access to the source code (which is on github!).

Preliminary Requirements:

- Have Android Studio setup and a project associated with the Lifestyle RPG source code.
- (Optional) Setup an emulator (with a phone of your choice) so you can run the app on your computer.

Steps:

1. Open up the Lifestyle RPG source code (should be a project) in Android Studio
2. Plug in an android phone (make sure the phone has developer allowances). Alternatively use the android studio emulator.
3. In the top navigation bar of android studio make the IDE target the phone / emulator of your choice.
4. Hit the green play arrow.
5. Wait for the app to be installed on your phone / emulator
6. You now have the LifestyleRPG app, have fun and good luck!
